# Part I

NAME OF PART I

# 1

## Structure

---

The template was designed using

LuaHBTeX, Version 1.18.0 (TeX Live 2024), but should also be compatible with pdflatex.

### CONFIGURATION

**Template** The main configs are stored under

- /0\_config/config.tex Packages and global settings.
- /0\_config/macros.tex Custom macros.

The dissertationpackage.sty should be loaded after /0\_config/config.tex to ensure load sequence for specific packages.

### BIBLIOGRAPHY

**Bibliography files** Bibliography files go into

- /bibliography

There are two special files for the Publication sections:

- /bibliography/own.bib to hold bibliography of you own publications.
- /bibliography/own\_openaccess.bib to hold open-access (for instance, ePrint or arXiv) bibliography of you own publications.

**Document** The bibliography is added to the document via

- /FrontBackmatter/Bibliography.tex
- /FrontBackmatter/Publications.tex

**Biblatex** If you use biblared with cryptobib in a folder called (say, in a folder called cryptobiblink), I strongly recommend to use **Extract From Bibliography** to extract the relevant entries via

```
python3 extract_from_bibliography.py diss
.bcf cryptobiblink/crypto.bib
cryptobiblink/dummy.bib >
bibliography/reduced_crypto.bib
```

I did not figure out what the 3rd input (“dummy.bib”) does, but the above worked flawlessly for me. This will significantly speed-up the compilation.

# 2

## How to use this Template

---

### 2.1 DUMMY SECTION

We need a section to show that in the ToC the numbers of the “sections” also contain a link to the respective page.

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy eget, consectetur id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Mauris ut leo. Cras viverra metus rhoncus sem. Nulla et lectus vestibulum urna fringilla ultrices. Phasellus eu tellus sit amet tortor gravida placerat. Integer sapien est, iaculis in, pretium quis, viverra ac, nunc. Praesent eget sem vel leo ultrices bibendum. Aenean faucibus. Morbi dolor nulla, malesuada eu, pulvinar at, mollis ac, nulla. Curabitur auctor semper nulla. Donec varius orci eget risus. Duis nibh mi, congue eu, accumsan eleifend, sagittis quis, diam. Duis eget orci sit amet orci dignissim rutrum.<sup>1</sup> Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.<sup>1</sup>

CITATION Citations [BT21] appear as preview in the margin. Floats cannot have footnotes (without modifications) and citations with \cite act like footnotes in this template. Consequently, you need to use \citeonly instead, which *only* print the citation in the text but not in the margin. Additionally, if there is too little space in the margin, LaTeX might fail to find a valid positioning. This might, for example, cause *latexmk* to loop infinitely (or throw an error). To easiest to avoid this is to limit the number of note in the margin, especially if there is a *full-width figure* on the page.

Floats include (but are not limited to):

- captions
- footnote, sidenote, sidecomment

<sup>1</sup>\footnote : This is a numbered and referenced footnote in the margin.

<sup>1</sup>\sidenote : This is a numbered but **un**referenced footnote in the margin.

\sidecomment : This is a unnumbered and unreferenced comment in the margin.

[BT21] Berger and Tiepelt, *On Forging SPHINCS+-Haraka Signatures on a Fault-tolerant Quantum Computer*

The class offers a *full* citation:

- `\fullfullcite`

Marcel Tiepelt and Jan-Pieter D’Anvers. *Exploiting Decryption Failures in Mersenne Number Cryptosystems*. Cryptology ePrint Archive, Paper 2020/367. <https://eprint.iacr.org/2020/367>. 2020. DOI: 10.1145/3384940.3388957. URL: <https://eprint.iacr.org/2020/367>

There is also a command to present your contributions:

- `\contentsource [TEXT]OFFICIAL CITETATIONOPEN CITETATIONContribution[IMPLEMENTATION]`

**PRINT VS DIGITAL VERSION** We consider the print version to be two-sided, and the digital version to be one-sided. This can be changed as option to the documentclass.

- `\documentclass [oneside]{dissertation}`
- `\documentclass [twoside]{dissertation}`

Both versions should have the same page numbers. This sometimes causes the one-sided version to have empty pages. If you want only one-sided version, search for “Match page numbers of one-sided and two-sided document” in the “dissertation.sty” package.

Additionally, the class file ensures that references occur only once on each visible page, that means once on every one-sided pages, and once on every double page for the two-sided version.

In “`0_config/macros.tex`” we provide two macros that change the behavior of LaTeX according to the option.

<sup>2</sup><https://github.com/mtiepelt/dissertation>

- `\linkto code {LINK}{WORD}`, for example, `implementation`<sup>2</sup>
  - embeds the link into a reference for one-sided
  - prints a footnote with the reference for two-sided
- The second macro changes the behavior of `\cleardoublepage` such that one-sided and two-sided documents have the same page numbers and numbering. That that there should be a `\cleardoublepage` every time LaTeX makes a new page, for example, in front of `\part`, `\include`, `\chapter`, ...

**FULLWIDTH** The classfile offers to use the full width of the page:

- The environment “fullwidth” sets the fullwidth for a page.
- The environment “fullwidthfig” can be used to only have part of a page (for example a figure) span the full width. Using “fullwidthfig” outside of a float can result issues with the margins.

**FLOATS** You might want to put `\blockmargin`, `\unblockmargin` around your “fullwidth” floats to avoid LaTeX trying to put a float in the (non-existing) margin next to it.

**Content Sources**

TEXT.

**Publication**

Marcel Tiepelt and Jan-Pieter D’Anvers. “Exploiting Decryption Failures in Mersenne Number Cryptosystems”. In: *Proceedings of the 7th on ASIA Public-Key Cryptography Workshop, APKC at AsiaCCS 2020, Taipei, Taiwan, October 6, 2020*. Ed. by Keita Emura and Naoto Yanai. ACM, 2020, pp. 45–54. DOI: [10.1145/3384940.3388957](https://doi.org/10.1145/3384940.3388957). URL: <https://doi.org/10.1145/3384940.3388957>

**Implementation**

[LinktoGithub](#)

**Contribution** Everyone did everything.

FIGURE 2.1: Linewidth Figure

## FIGURES AND CAPTIONS

FIGURE 2.2: Fullwidth Figure

FIGURE 2.3: Sidecaption

(a) Subfigure in Memoir class

(b) Subfigure in Memoir class

FIGURE 2.4: Caption of subfigure in Memoir.

ACRONYMS This is a acronym: [Advanced Encryption Standard \(AES\)](#). In `disseratationpackage.sty` there are a few lines that allow to link only the first occurence. Search for “LINK”, and if you uncomment those lines, then

- This should not have a hyperref: [AES](#).
- You can reset the reference using `\glsresetall`, for example, after every new part. Now it should be referenced and expanded again: [Advanced Encryption Standard \(AES\)](#)

#### OTHER THINGS

- If you use a `\chapter *{CHAPTER}` you might want to add a line `\sectionmark {CHAPTER}` to ensure that the header of subsequent pages is set correctly.
- Using `\left`, `\right` in footnotes causes latexmk to loop infinitely.

## Part II

### APPENDIX

## COLOPHON

This thesis was typeset using  $\text{\LaTeX}$  and the memoir documentclass. The template<sup>3</sup> is based on Friedrich Wiemer’s thesis<sup>4</sup>, which itself is based Aaron Turon’s thesis<sup>5</sup>, itself again a mixture of classicthesis<sup>6</sup> by André Miede and tufte-latex<sup>7</sup>, based on Edward Tufte’s *Beautiful Evidence*.

The bibliography was processed by Biblatex. The body text is set 10/14pt (long primer) on a 26pc measure. The margin text is set 8/9pt (brevier) on a 12pc measure. Matthew Carter’s Charter acts as both the text and display typeface. Monospaced text uses Jim Lyles’s Bitstream Vera Mono (“Bera Mono”).

The thesis was written using *Sublime Text*<sup>8</sup> with the *LatexTools* Plugin, many of the graphics were build using *Ipe*<sup>9</sup>. The writing process was supported by the *write-good* linter<sup>10</sup> with the corresponding Sublime Text plugin<sup>11</sup>. Additionally, *Thesaurus*<sup>12</sup> and *DeepL*<sup>13</sup> were used to improve the wording of individual paragraphs.
